

Your breathing apparatuses are designed to withstand most environmental hazards. Breathing air cylinders are designed to cover and protect your most valuable asset, under high pressure, but the quality of this security comes at a price. Even the most robust compressed air cylinders can lose operational safety by superficial damage or can become unusable.

So it is worth keeping your cylinders undamaged and clean while they are in use under protected conditions.

Our completely redesigned and improved "Basic" protective covers meet all basic needs for the protection of your cylinders.

Easy to use, safe and reliable

### Shock protected

The new and large inner padding with medium-sized pores located on the bottom of the bottle offers optimal impact protection and heat resistance.

### Durable

The blended mix contains an antistatic structure and is flame-retardant because of the special weave and impregnation.

The impregnation also supports to repel water, dust, oils and grease.

### Fit

Cover suits for all typical 6.8 liter cylinders.

### Visible

Increased visibility is provided by a large reflector print. Especially the signal yellow version clearly optimizes the general visibility even in low light environment.

### Secured

The cover is closable with a robust zipper on the neck of the cylinder in order to limit the potential contact surface for damage on the cylinder.

Velcro locking prevents accidental opening and the zipper is protected against dirt or damages under a textile layer.

## Technical Data

---

Material	Modacrylic canvas
Measurements	Circumference ca. 520 mm, Diameter ca. 165 mm, Length ca. 520 mm
Washing	40°C with soft detergent

## Certificate

---

Tested as SCBA accessory for series AirMaXX and AirGo according to EN 137:2007 (flame engulfment test)
